A scatter plot on a dark blue background showing two classes of data points. One class is represented by red dots and the other by white dots. The points are distributed along a diagonal line from the bottom-left to the top-right. There are two distinct clusters of red points: one in the lower-left region and another in the upper-right region. The white points form a continuous, elongated band between these two red clusters, following the same diagonal trend. The overall shape of the data distribution is elongated and diagonal.
